

IT Security Basics

Exercise

Social Engineering Exercise

- The goal of the exercise is to hack the password of a ZIP-File
- What do you need to hand in: a token that you find in the ZIP-File
  - Be aware: each password and each token is unique! Therefore it is pointless to hand in the token someone else in the group found
- It is also useless to ask in other groups for your token

- What you need:
  - The ZIP-Folder secured using a password including your Token
  - The ZIP-Folder including all social media posts

- This will be worth 10% of your grade

Social Engineering Exercise

- What to do?
  - Julia did nearly everything wrong that she could when choosing her passwords: She used a lot of personal information
  - Everyone of you gets a ZIP-File that is protected with a password
    - In the ZIP-File is a PDF-File that includes an unique token
    - You will find a excel sheet in Moodle that tells you which ZIP-File is yours
  - Gather as much personal information of Julia as possible. This includes everything like e.g. names, dates, hobbies, things she like, etc. – in short: everything that can be used in a password
  - Use the information to hack the password
    - Little hint 1: The passwords always consist of two pieces of personal information that are bound together
    - Little hint 2: The passwords do not contain any special characters or ä, ü, ö or ß
    - Little hint 3: You do not need to try every possible password manually – you can also write a little computer program that takes a list of information and try all possible passwords until it finds the correct one

Social Engineering Exercise

- What do you need to hand in?
  - The only thing that you need to hand in is the token in your ZIP-file
    - NOT the password!!!!
    - Hand in the 30 character random token you find in the PDF file in the ZIP!
  - Important: Make sure to take the correct ZIP-File so that the handed in token fits your ZIP-file

Social Engineering Exercise

- Disclaimer
  - Julia Ternow is not a real person, it is a fictive person only created for this course
  - Moreover: All Persons motioned on the account (friends, family, co-worker) and also places and companies does not exists in real live. They are also fictive and were created for the exercises.
  - None of the information on the profile is real – everything is fictive!
